

## POLICY 7 Reducing Carbon Emissions

### Planning an Eco-friendly City

#### —The Basic Principles—

- Reduction of CO<sub>2</sub> emissions caused by rapid socioeconomic growth; leading community development towards a low carbon emission environment.
- We plan to utilize the introduction, regional application and energy efficiency of cutting edge technology to lower the environmental burden.
- We will develop Urban Greenery Promotion. Greenery in the city will absorb CO<sub>2</sub> and alleviate the urban Heat Island Phenomenon.
- In following with the reduction on environmental burden expected in the field of thoroughfare and transportation development, we will cooperate and take efforts to develop our city in this field.

## POLICY 8 Globalization, Tourism and Culture

### Utilizing our community to sustain, improve, and promote the beauty of our city

#### —The Basic Principles—

- Making use of tradition and progress, while coexisting with the multitude of historical and natural resources that characterize the city, we will lead the construction of an environment where Japanese Citizens and Foreign Citizens can mutually thrive.
- We will improve the attraction of tourism resources while promoting the local character of each area.
- We will strategically promote the attractions and characteristics of each area, while building a network of resources.
- We will support local cultural inheritance and promote sports activities as a means of exchange in our community.
